

Model Court All Sites Conference 2005 State Level Disproportionality Analysis

Report authored by
Joshua Padilla, M.A.
Research Assistant, Permanency Planning for Children Department

A major focus at the 2008 Victims Act Model Court All Sites Conference is implementation of the national Model Courts' Project goal of reducing racial disproportionality and disparities in the dependency court system. The proportion of ethnic-minorities is greater in juvenile and family courts, and the child welfare system, than their proportions in the general population.¹ This data report provides the most recent demographic and disproportionality information available for the states represented at the All Sites Conference.

There are three common calculations used to report disproportionality. The most commonly used calculation in research is a *disproportionality rate*, which is a comparison of the percentage of children of a particular race or ethnicity in the child welfare system to their percentage in the general population. This produces a value where numbers between 0.00-0.99 indicates under-representation, and numbers greater than 1.00 signifies disproportionality. Numbers greater than 2.00, for example, indicate that the proportion of this group in foster care is double that of the group in the general child population (e.g., in California, the disproportionality rate for African Americans is 3.43, indicating the proportion of these children in foster care is 3.43 times greater than their representation in the general population).

The second calculation is the *disproportionality rate per thousand*, which is the number of children of a particular race or ethnicity that are represented in the child welfare system per 1000 of the same race or ethnicity in the general population. For example, in Arizona, the rate per thousand score is 23, which indicates that 23 out of every 1,000 African American children in the state are in foster care. The third calculation is *the disproportionality-disparity ratio*, a comparison of the representation of a particular racial or ethnic group to other racial or ethnic groups. In this analysis, for example, the disparity ratio of a particular ethnic group is compared to Caucasians. For example, in Arizona, the disparity ratio for African Americans compared to Caucasians is 3.61, indicating that African Americans are three times as likely to become involved in foster care than Caucasians.

These common calculations were used to provide Model Courts participating in the Victims Act Model Court All-Sites Conference with the most current disproportionality numbers for their state. The most recent ethnic population figures were obtained from the 2005 American Community Survey conducted by the U.S. Census. Missing data were supplemented with 2000 U. S. Census figures (indicated by an asterisk after the population number in the data tables). Foster care data were derived from the Adoption and Foster Care Analysis and Reporting System (AFCARS) 2005 Foster Care File. These data sources were used to calculate the disproportionality rating for children who were African American, American Indians, Asian, Caucasian, Hawaiian/Pacific Islanders, and Hispanic² for each of the states represented by Model Courts at the All-Sites Conference.

¹ Hill, R. B. (2006). Synthesis of research on disproportionality in child welfare: An update. Casey-CSSP Alliance for Racial Equity in the Child Welfare System.

² Population data are first provided by race alone; then below that total are data for children of all races that indicate Hispanic as their ethnicity.

The results of the three common calculations of disproportionality for each ethnic group are presented in the following state scorecards. The collection and analysis of county-level data for each of the Model Court sites is currently underway and will be forthcoming.

STATE RACE EQUITY SCORECARDS

Arizona Race Equity Scorecard							
Percentage, Disproportionality Rate, Rate Per Thousand, and Disparity Ratio Indices by Race and Ethnicity for Children in Out of Home Care							
Race/Ethnicity	Estimated Population (0-17)		Children in Out of Home Care		Disproportionality Rate	Rate Per Thousand	Disparity Ratio Compare to Caucasians
	#	%	#	%			
African American	55,490	3.5	1,293	8.1	2.31	23	3.61
American Indian	102,508	6.5	423	2.6	0.40	4	0.63
